March 9, 2011

Dear Residents, Contractors, Haulers, and Developers:

We look forward to another construction season this year, however, this time of the year compels us to remind you of the impending load restrictions period.

Minnesota Statute 169.87 dictates that all loads on paved roads within the City will be limited to 10 tons per axle during the Spring Load Restriction period unless otherwise posted. However, because many roads within the City have not been constructed for this heavier loading, the City is requesting that loads in excess of 5 tons per axle utilize the streets listed on the back of this letter as much as possible.

The City of Hastings will place limits into effect at the same time as the Minnesota Department of Transportation. MnDOT will initiate spring load restrictions at 12:01 AM on Monday, March 14, 2011. More information regarding the load limits is available on the MnDOT website at:

www.mrr.dot.state.mn.us or by calling (651) 366-5400 or 1-800-723-6543.

Please schedule deliveries to avoid hauling oversized loads during this period. The City WILL enforce load restrictions.

You may also contact the City's Engineering Department at (651) 480-2334, or the Public Works Department for further local road restrictions information at (651) 480-6185.

Sincerely,

Dave Chalmers
Engineering Supervisor

Note: You are receiving this letter because you are on a mailing list that we have compiled based on past interest. If you would like to be removed from this list, please email Samantha Hanson at the Engineering Department at shanson@ci.hastings.mn.us

City of Hastings

2011 Spring Load Restrictions

NOTE: While all streets within City limits will have a 10 ton per axle load limit, the following streets/highways have been constructed specifically for heavier loads:
